

2009 Side X Side Applications & Pricing

The following list is intended as a part number reference guide. If your side x side, or adjustability desired is not listed, that does not mean we don't make a shock to fit your application. We will custom-build almost any shock to match your specifications, where technically possible. If you have a question or would like to place an order, please call (610) 375-6180.
